to allow resilient movement of said walls.

A8

13. (Amended) A mirror mounting assembly according to claim 12 wherein said force member comprises a spring.

14. (Amended) A mirror mounting assembly according to claim 8 wherein said link comprises a flat elongate member.

16. (Amended) A mirror mounting assembly for preventing unwanted movement of said mirror comprising:

a mirror support for holding a mirror,

a base portion,

a pivoting joint between said mirror support and said base portion that allows said mirror support to pivot with respect to said base portion,

a pair of links extending between said mirror support and said base, a first end of each said link held with respect to either said mirror support or said base portion, and

a pair of apertures in either said mirror support or said base into which the second ends of said links locate, there being a tight sliding fit between said apertures and said links which allows said links to move through said apertures so that said mirror support may be adjusted with respect to said base, but which act to prevent unwanted movement of said mirror support during normal use.

17. (Amended) A mirror mounting assembly according to claim 16 wherein each said aperture comprises a pair of walls, one of said walls of each said aperture being movable and further comprising a force member applied to each said movable wall so that they are resiliently movable.

18. (Amended) A mirror mounting means according to claim 17 wherein said force member comprises a spring placed between said movable walls.

Claim 22 has been canceled, without prejudice.
